## Osimertinib + Savolitinib in pts with EGFRm MET-Amplified/Overexpressed NSCLC: Phase Ib TATTON Parts B and D Final Analysis

Drugs: osimertinib, savolitinib | NCT02143466

### Overview

- Final data from the expansion cohorts of the TATTON study
- Analyzing the combination of savolitinib (MET inhibitor) plus osimertinib (EGFR inhibitor) in overcoming MET-driven resistance to EGFR inhibitors in locally advanced or metastatic MET amplified or overexpressed EGFR-mutated NSCLC

### Safety Results

- Grade  $\geq 3$  adverse events were experienced in 50-62% of patients
- Serious adverse events occurred in 38-49% of patients

[LINK TO ARTICLE](#)

### Efficacy Results

- Overall response rate (ORR) varied from 33-67% and median PFS varied from 5.5-11.1 months depending on T790M status and history of treatment with a 3rd generation EGFR inhibitor.

### Conclusion

- Safety of savolitinib combined with osimertinib is similar to what has been previously reported
- Efficacy outcomes suggest this combination may overcome MET-based resistance in patients with NSCLC who progressed on an EGFR inhibitor
- This combination is being explored further in the SAVANNAH (NCT03778229) and ORCHARD (NCT03944772) studies

## Resistance to MET Inhibition in MET Driven NSCLC and Response after Switching from Type I to Type II MET Inhibitors

Drugs: crizotinib, cabozantinib

### Overview

- The authors identified 7 patients with MET-driven NSCLC who were treated with type I MET inhibitors and assessed the expression of MET from tumor biopsies at baseline and progression
- Three patients had MET exon 14 skipping, 3 had MET amplification, 1 had KIF5B-MET fusion
- Identified both on- and off-target resistance mechanisms, including KRAS mutations, HER2 amplifications, and MET kinase domain p.D1246N and p.Y1248H mutations.

[LINK TO ARTICLE](#)

### Results

- In one patient, both MET exon 14 skipping and the MET p.D1246N mutation was present at baseline (before the patient started crizotinib) as well as after the patient progressed on crizotinib
  - Patient was switched to type II MET inhibitor cabozantinib which resulted in progression
- Patient with KIF5B-MET fusion progressed on crizotinib and was found to have a MET p.Y1248H mutation
  - Patient was switched to cabozantinib with an initial response but subsequently progressed

### Conclusion

- This highlights the need for further investigation into resistance mechanisms in patients with MET-driven NSCLC who progress on type I MET inhibitors

## Tepotinib Safety in MET Exon 14 (METex14) Skipping NSCLC: Updated Results from the VISION Trial

Drug: tepotinib | NCT02864992

### Overview

- Updated safety data from the VISION trial
- Analyzed tepotinib (MET inhibitor) in patients with advanced MET exon 14 skipping NSCLC

### Safety Results

- Most common treatment-related adverse events (TRAEs) included peripheral edema, nausea, diarrhea, increased creatinine, and hypoalbuminemia
  - Majority of which were mild to moderate in severity

- Adverse events led to dose reduction in 27.8% of patients, treatment interruption in 35.3% of patients, and treatment discontinuation in 10.6% of patients
- Most common TRAE leading to treatment modification was peripheral edema
- Serious TRAEs (mostly pleural effusion or peripheral edema) were reported in 12.2% of patients
- Two patients had TRAEs that led to death (dyspnea and acute respiratory failure)

[LINK TO ARTICLE](#)

## Activity of Tepotinib in Brain Metastases (BM): Preclinical and Clinical Data in MET Exon 14 (METex14) Skipping NSCLC

Drug: tepotinib | NCT02864992

### Overview

- Researchers investigated tumor activity of tepotinib in preclinical models and patients with brain metastases and MET exon 14 skipping NSCLC in the VISION study
- Brain penetration of tepotinib was assessed in rats, and was found to have high binding in rat brain tissue
- Tumors in the patient-derived xenograft (PDX) models both regressed significantly

### Efficacy Results

- A total of 21 patients with brain metastases in the VISION study received tepotinib
- Best overall response was a partial response in 52.4% of patients, which was similar to 45.2% in the overall population
- Median duration of response was 9.5 months
- Median progression-free survival was 9.5 months
- Tepotinib activity in brain metastases will continue to be assessed with brain scans in this cohort

[LINK TO ARTICLE](#)

## PD-L1 Expression and Efficacy of Immunotherapy in Japanese Patients with NSCLC Harboring MET Exon 14 Skipping Mutation

Drug: immune checkpoint inhibitors

### Overview

- Evaluated PD-L1 expression and how it relates to efficacy of immune checkpoint inhibitors (ICIs) in 23 patients with MET exon 14 skipping NSCLC

[LINK TO ARTICLE](#)

### Results

- One patient had 0% PD-L1 expression, 6 patients had 1-49% PD-L1 expression, and 16 patients had more than 50% PD-L1 expression
- Seven of these patients received an ICI with an objective response rate (ORR) of 42.9%
- Early disease progression was observed in all patients within two months of initiating an ICI

## Neutrophil Counts Deregulated by C-met TKIs and the Variation Predicts Treatment Response in NSCLC

Drug: MET inhibitors

### Overview

- Investigated the theory that MET inhibitors impair neutrophil recruitment to the tumor, implying that measuring changes in circulating neutrophils could potentially correlate with treatment response

[LINK TO ARTICLE](#)

### Results

- MET inhibitors deregulated absolute neutrophil counts in peripheral blood
- Variations in neutrophil count were not correlated with progression-free survival

### Conclusion

- Circulating neutrophil counts may predict treatment response but do not impact survival outcomes

## Telisotuzumab Vedotin (ABBV 399, Teliso-V) Combined with Erlotinib

Drug: telisotuzumab vedotin | NCT02099058

### Overview

- Phase I trial that assessed the safety and efficacy of ABBV 399 with erlotinib (EGFR inhibitor) in patients with MET exon 14 skipping/MET amplified and EGFR-mutated metastatic NSCLC

### Safety Results

- Most common adverse events included peripheral neuropathy (52%), rash (38%), diarrhea (38%), fatigue (31%), shortness of breath (31%), and low albumin (31%)

[LINK TO ARTICLE](#)

### Efficacy Results

- Objective response rate (ORR) was 34.5%

### Conclusion

- Results suggest the combination of ABBV 399 and erlotinib has promising antitumor activity with a tolerable safety profile

## Telisotuzumab Vedotin (ABBV 399, Teliso-V) Monotherapy

Drug: telisotuzumab vedotin | NCT02099058

### Overview

- Phase I trial that assessed the safety and efficacy of ABBV 399, an antibody drug conjugate (ADC) that combines an anti-MET monoclonal antibody with a cytotoxic chemotherapy molecule (MMAE), in patients with MET-driven NSCLC

### Safety Results

- Most common treatment-related adverse events (TRAEs) included fatigue (25%), nausea (23%), neuropathy (15%), decreased appetite (13%), vomiting (13%), and diarrhea (10%)

- Eight patients experienced a grade 3 or higher adverse event including fatigue, low albumin, anemia, and neutropenia
- No treatment-related deaths were reported

### Efficacy Results

- Of the 16 patients who were treated, 3 patients had a partial response (PR)
- Mediation duration of response was 4.8 months
- Median progression-free survival (PFS) was 5.7 months

[LINK TO ARTICLE](#)

## First-in-human (FIH) study of SCC244, a novel potent and highly selective c- MET inhibitor, in patients (pts) with advanced non-small cell lung cancer (NSCLC)

Drug: SCC244 | NCT03466268

### Overview

- Results of the first-in-human phase I study of a new MET inhibitor SCC244 in 19 patients with advanced NSCLC (enrolled regardless of MET status)

### Safety Results

- Most common treatment-related adverse events (TRAEs) included peripheral edema (36.8%), decreased appetite (36.8%), headache (31.6%), dizziness (31.6%), nausea/vomiting (31.6%), increased bilirubin (26.3%), and weakness (26.3%)

### Efficacy Results

- In 17 evaluable patients, two patients experienced a partial response (PR) with a duration of response from 7.3 to 11.1 months
- One of these patients had MET exon 14 skipping, and the other patient had MET amplification

### Conclusion

- This study showed a manageable safety profile and antitumor activity of SCC244. SCC244 is being studied further in patients with MET exon 14 skipping NSCLC

## MET Clinical Trials

### IMPORTANT

Below is a list of clinical trials involving MET alterations on [ClinicalTrials.gov](https://clinicaltrials.gov). This list is a summary snapshot of emerging therapeutic strategies, details of these trials can be found at [ClinicalTrials.gov](https://clinicaltrials.gov). Recruitment for clinical trials is constantly changing, and many eligibility criteria are typically required in order to participate. The treatments being studied in the clinical trials listed here are meant for reference only and do not replace medical advice. Always have a discussion with your oncologist if you have questions about clinical trial participation.

This list was last updated on April 28, 2021.

## TKI TRIALS

### NIH Identifier: NCT04084717

Link: <https://clinicaltrials.gov/ct2/show/NCT04084717>

Title: Study of Crizotinib for ROS1 and MET Activated Lung Cancer  
Status: Recruiting  
Drug: Crizotinib  
Phase: P2  
Countries: Canada

### NIH Identifier: NCT03693339

Link: <https://clinicaltrials.gov/ct2/show/NCT03693339>

Title: Capmatinib in Patients With Non-small Cell Lung Cancer Harboring cMET exon14 Skipping Mutation  
Status: Recruiting  
Drug: Capmatinib  
Phase: P2  
Countries: Republic of Korea

### NIH Identifier: NCT03993873

Link: <https://clinicaltrials.gov/ct2/show/NCT03993873>

Title: Phase 1 Study of TPX-0022, a MET/CSF1R/SRC Inhibitor, in Patients With Advanced Solid Tumors Harboring Genetic Alterations in MET  
Status: Recruiting  
Drug: TPX-0022  
Phase: P1  
Countries: US, Republic of Korea

### NIH Identifier: NCT02864992

Link: <https://clinicaltrials.gov/ct2/show/NCT02864992>

Title: Tepotinib Phase II in Non-small Cell Lung Cancer (NSCLC) Harboring MET Alterations (VISION)  
Status: Recruiting  
Drug: Tepotinib  
Phase: P2  
Countries: US, Austria, Belgium, France, Germany, Israel, Italy, Japan, Republic of Korea, Netherland, Poland, Spain, Switzerland, Taiwan

### NIH Identifier: NCT03175224

Link: <https://clinicaltrials.gov/ct2/show/NCT03175224>

Title: APL-101 Study of Subjects With NSCLC With c-Met EXON 14 Skip Mutations and c-Met Dysregulation Advanced Solid Tumors (SPARTA)  
Status: Recruiting  
Drug: APL-101  
Phase: P1/P2  
Countries: US, Australia, Canada, Italy, Puerto Rico, Singapore, Spain, Taiwan, Ukraine, United Kingdom

### NIH Identifier: NCT04258033

Link: <https://clinicaltrials.gov/ct2/show/NCT04258033>

Title: A Study of PLB1001 in Non-small Cell Lung Cancer With c-Met Dysregulation  
Status: Recruiting  
Drug: PLB1001 also known as Bozitinib and APL-101  
Phase: P2  
Countries: China

### NIH Identifier: NCT02750215

Link: <https://clinicaltrials.gov/ct2/show/NCT02750215>

Title: A Study of Capmatinib (INC280) in NSCLC Patients With MET Exon 14 Alterations Who Have Received Prior MET Inhibitor  
Status: Active, Not Recruiting  
Drug: Capmatinib  
Phase: P2  
Countries: US

### NIH Identifier: NCT02414139

Link: <https://clinicaltrials.gov/ct2/show/NCT02414139>

Title: Clinical Study of Oral cMET Inhibitor INC280 in Adult Patients With EGFR Wild-type Advanced Non-small Cell Lung Cancer (Geometry Mono-1)  
Status: Recruiting  
Drug: Capmatinib  
Phase: P2  
Countries: US, Argentina, Austria, Belgium, Brazil, Canada, France, Germany, Israel, Italy, Japan, Republic of Korea, Lebanon, Mexico, Netherlands, Norway, Poland, Russia, Singapore, Spain, Sweden, Switzerland, Taiwan, Turkey, United Kingdom

### NIH Identifier: NCT01639508

Link: <https://clinicaltrials.gov/ct2/show/NCT01639508>

Title: Cabozantinib in Patients With RET Fusion-Positive Advanced Non-Small Cell Lung Cancer and Those With Other Genotypes: ROS1 or NTRK Fusions or Increased MET or AXL Activity  
Status: Recruiting  
Drug: Cabozantinib  
Phase: P2  
Countries: US

### NIH Identifier: NCT02219711

Link: <https://clinicaltrials.gov/ct2/show/NCT02219711>

Title: Phase 1/1b Study of MGCD516 in Patients with Advanced Cancer  
Status: Active, Not Recruiting  
Drug: MGCD516  
Phase: P1  
Countries: US, Republic of Korea

### NIH Identifier: NCT04270591

Link: <https://clinicaltrials.gov/ct2/show/NCT04270591>

Title: Assess the Anti-tumor Activity and Safety of Glumetinib in Patient with Advanced c-MET-positive Non-Small Cell Lung Cancer  
Status: Recruiting  
Drug: Glumetinib  
Phase: P1/P2  
Countries: US, China

### NIH Identifier: NCT04693468

Link: <https://clinicaltrials.gov/ct2/show/NCT04693468>

Title: Talazoparib and Palbociclib, Axitinib, or Crizotinib for the Treatment of Advanced or Metastatic Solid Tumors, TalaCom Trial  
Status: Recruiting  
Drug: Talazoparib + Palbociclib, Axitinib or Crizotinib  
Phase: P1  
Countries: US

## UMBRELLA TRIALS

**NIH Identifier: NCT03574402**

Link: <https://clinicaltrials.gov/ct2/show/NCT03574402>

Title: Phase II Umbrella Study Directed by Next Generation Sequencing (TRUMP)  
Status: Recruiting  
Trial Name: Umbrella (TRUMP)  
Phase: P2  
Countries: China

**NIH Identifier: NCT02693535**

Link: <https://clinicaltrials.gov/ct2/show/NCT02693535>

Title: TAPUR: Testing the Use of Food and Drug Administration (FDA) Approved Drugs That Target a Specific Abnormality in a Tumor Gene in People With Advanced Stage Cancer (TAPUR)  
Status: Recruiting  
Trial Name: TAPUR  
Phase: P2  
Countries: US

**NIH Identifier: NCT02664935**

Link: <https://clinicaltrials.gov/ct2/show/NCT02664935>

Title: National Lung Matrix Trial: Multi-drug Phase II Trial in Non-Small Cell Lung Cancer  
Status: Recruiting  
Trial Name: Matrix  
Phase: P2  
Countries: United Kingdom

**NIH Identifier: NCT02465060**

Link: <https://clinicaltrials.gov/ct2/show/NCT02465060>

Title: Targeted Therapy Directed by Genetic Testing in Treating Patients With Advanced Refractory Solid Tumors, Lymphomas, or Multiple Myeloma (The MATCH Screening Trial)  
Status: Recruiting  
Trial Name: Match  
Phase: P2  
Countries: US, Guam, Puerto Rico

## IMMUNOTHERAPY TRIALS

**NIH Identifier: NCT02323126**

Link: <https://clinicaltrials.gov/ct2/show/NCT02323126>

Title: Study of Efficacy and Safety of Nivolumab in Combination with EGF816 and of Nivolumab in Combination With INC280 in Patients With Previously Treated Non-small Cell Lung Cancer (EGF816)  
Status: Active, Not Recruiting  
Drug: Nivolumab + EGF816 + Capmatinib  
Phase: P2  
Countries: US, Australia, France, Germany, Italy, Netherlands, Singapore, Spain, Switzerland

**NIH Identifier: NCT03983954**

Link: <https://clinicaltrials.gov/ct2/show/NCT03983954>

Title: Naptumomab Estafenatox in Combination With Durvalumab in Subjects With Selected Advanced or Metastatic Solid Tumors  
Status: Recruiting  
Drug: Naptumomab Estafenatox + Durvalumab  
Phase: P1  
Countries: Israel

**NIH Identifier: NCT04310007**

Link: <https://clinicaltrials.gov/ct2/show/NCT04310007>

Title: Testing the Addition of the Pill Chemotherapy, Cabozantinib, to the Standard Immune Therapy Nivolumab Compared to Standard Chemotherapy for Non-small Cell Lung Cancer  
Status: Recruiting  
Drug: Cabozantinib + Nivolumab  
Phase: P2  
Countries: US

**NIH ID: NCT02954991**

Link: <https://clinicaltrials.gov/ct2/show/NCT02954991>

Title: Phase 2 Study of Glesatinib, Sitravatinib or Mocetinostat in Combination with Nivolumab in Non-Small Cell Lung Cancer  
Status: Recruiting  
Drug: Glesatinib, Sitravastinib or Mocetinostat + Nivolumab  
Phase: P2  
Countries: US

**NIH ID: NCT03666143**

Link: <https://clinicaltrials.gov/ct2/show/NCT03666143>

Title: A Phase 1b Study to Assess Sitravatinib in Combination with Tislelizumab in Patients With Advanced Solid Tumors.  
Status: Recruiting  
Drug: Sitravatinib + Tislelizumab  
Phase: P1  
Countries: Australia, China

**NIH ID: NCT04323436**

Link: <https://clinicaltrials.gov/ct2/show/NCT04323436>

Title: Study of Capmatinib and Spatalizumab/Placebo in Advanced NSCLC Patients with MET Exon 14 Skipping Mutations  
Status: Recruiting  
Drug: Capmatinib + Spatalizumab  
Phase: P2  
Countries: Belgium, France, Germany, Japan

**NIH ID: NCT04139317**

Link: <https://clinicaltrials.gov/ct2/show/NCT04139317>

Title: Safety and Efficacy of Capmatinib (INC280) Plus Pembrolizumab vs Pembrolizumab Alone in NSCLC With PD-L1 $\geq$  50%  
Status: Recruiting  
Drug: Capmatinib + Pembrolizumab  
Phase: P2  
Countries: US, Australia, Belgium, Czechia, France, Germany, Hong Kong, India, Italy, Japan, Malaysia, Spain, Taiwan, Thailand

**NIH Identifier: NCT01911507**

Link: <https://clinicaltrials.gov/ct2/show/NCT01911507>

Title: INC280 and Erlotinib Hydrochloride in Treating Patients With Non-small Cell Lung Cancer  
Status: Active, Not Recruiting  
Drug: Capmatinib + Erlotinib  
Phase: P1  
Countries: US

## EGFR + MET TRIALS

**NIH Identifier: NCT03944772**

Link: <https://clinicaltrials.gov/ct2/show/NCT03944772>

Title: Phase 2 Platform Study in Patients With Advanced Non-Small Lung Cancer Who Progressed on First-Line Osimertinib Therapy (ORCHARD) (ORCHARD)

Status: Recruiting

Drug: Osimertinib + Savolitinib

Phase: P2

Countries: US, Denmark, Japan, Republic of Korea, Netherlands, Norway, Spain, Sweden

**NIH Identifier: NCT03940703**

Link: <https://clinicaltrials.gov/ct2/show/NCT03940703>

Title: A Study of Tepotinib Plus Osimertinib in Osimertinib Relapsed Mesenchymal-epithelial Transition Factor (MET) Amplified Non-small Cell Lung Cancer (NSCLC) (INSIGHT 2) (INSIGHT 2)

Status: Recruiting

Drug: Tepotinib + Osimertinib

Phase: P2

Countries: US, Belgium, China, France, Germany, Hong Kong, Japan, Republic of Korea, Malaysia, Netherlands, Russia, Singapore, Spain, Taiwan, Thailand, Vietnam

**NIH Identifier: NCT02609776**

Link: <https://clinicaltrials.gov/ct2/show/NCT02609776>

Title: Study of Amivantamab, a Human Bispecific EGFR and cMet Antibody, in Participants with Advanced Non-Small Cell Lung Cancer (CHRYSALIS)

Status: Recruiting

Drug: Amivantimab

Phase: P1

Countries: US, Australia, Canada, China, France, Italy, Japan, Republic of Korea, Spain, Taiwan, United Kingdom

**NIH ID: NCT04606771**

Link: <https://clinicaltrials.gov/ct2/show/NCT04606771>

Title: A Study Comparing Savolitinib Plus Osimertinib vs Savolitinib Plus Placebo in Patients with EGFRm+ and MET Amplified Advanced NSCLC (CoC)

Status: Recruiting

Drug: Osimertinib + Savolitinib

Phase: P2

Countries: US, Argentina, Brazil, Chile, India, Republic of Korea, Taiwan, Thailand, Vietnam

**NIH Identifier: NCT03778229**

Link: <https://www.clinicaltrials.gov/ct2/show/NCT03778229>

Title: Osimertinib Plus Savolitinib in EGFRm+/MET+ NSCLC Following Prior Osimertinib (SAVANNAH)

Status: Recruiting

Drug: Osimertinib + Savolitinib

Phase: P2

Countries: US, Brazil, Canada, Chile, Denmark, France, India, Israel, Italy, Japan, Republic of Korea, Spain, Taiwan, Vietnam

## ANTIBODY-ADC TRIALS

**NIH Identifier: NCT03539536**

Link: <https://clinicaltrials.gov/ct2/show/NCT03539536>

Title: Study of Telisotuzumab Vedotin (ABBV-399) in Subjects with Previously Treated c-Met+ Non-Small Cell Lung Cancer

Status: Recruiting

Drug: ABBV-399

Phase: P2

Countries: US, Australia, Belgium, Canada, China, France, Germany, Greece, Hungary, Ireland, Israel, Italy, Japan, Republic of Korea, Romania, Russia, Spain, Taiwan, Turkey, United Kingdom

**NIH Identifier: NCT04077099**

Link: <https://clinicaltrials.gov/ct2/show/NCT04077099>

Title: REGN5093 in Patients With MET-Altered Advanced Non-Small Cell Lung Cancer

Status: Recruiting

Drug: REGN5093

Phase: P1, P2

Countries: US, Republic of Korea

*The MET Crusader newsletter is written for the benefit of MET patients, caregivers, clinicians and researchers. It contains an outlined summary of MET related abstracts, posters and articles. The outline summaries improves readability while providing key metrics. The summaries are not intended to replace the abstracts, posters or articles. Where possible, links are provided to the source materials. Where links are not possible, a reference is made to help locate the source documents. If you need help in finding a document contact us.*

*Where possible, the outlined summaries contain the NIH ID that links to the actual clinical trial. This helps our community in the evaluation of clinical trials. The drug(s) under trial is also provided.*

*The MET Crusader newsletter can be freely shared. Pass it along. If you are a MET patient or caregiver and would like to be on our email list, go to **Join Us** on [www.metcrusaders.org](http://www.metcrusaders.org) and register. If you are a clinician or researcher, email your information to [info@metcrusaders.org](mailto:info@metcrusaders.org).*
